Today's agenda

1. Executive Overview
2. Scenario Response
3. Measurement & Data Strategy
4. Operating Model & Partnership
5. Q&A / Next Steps

Executive Overview

LEVEL is a growth partner built for PSECU's complexity

We work at the intersection of **performance, creativity, lifecycle, and brand**, helping brands make better investment decisions as they scale.

250+

passionate and
talented marketers

\$300M+

media under direct
management

Top 1%

of Google Premier
agency partners

- Founded in Pittsburgh 2010
- 50 PA based team members
- Co-Founders went to Duquesne & Pitt
- PGH Business Times' Fast 50
- Recipient of University of Pittsburgh Katz School Corporate Appreciation Award

GOOD
ENOUGH
ISN'T.

LEVEL partners with brands to turn complexity into growth by aligning intelligence, execution, and learning into one operating system

1 AI Orchestration

An intelligence layer that makes every dollar smarter and charts a path to member growth

2 Compounding Customer Journeys

System-level optimization from acquisition to activation to loyalty

3 Shared-Outcomes Partnerships

Accountability tied directly to business results: activated products, new members, and long-term member value activated and engaged cardholder

Integrated AI-powered services that drive growth in a connected system

We connect strategy, execution, and measurement into a **single operating model**.
This way every action informs the next, and performance compounds instead of resetting.

Strategy & Consulting

Align brand, media, and technology around a single growth system.

Content & Creative

Design creative built to perform and improve with real-time signal.

Media & Search Optimization

Activate precision media and AI-informed search strategies at scale.

Data Science & Analytics

Turn complex signals into actionable insight.

CRM, Nurture & Loyalty

Use AI-informed journey mapping to personalize experiences and compound lifetime value.

LEVEL's AI Powered Intelligence Suite that give our clients a competitive edge

Level.**Pathfinder**

Maps **the member decision journeys** by product informing channel mix, creative, and budget allocation.

Level.**Signal**

Shifts bidding decisions from app volume to **predicted product value** using PSECU's member data.

Level.**Prism**

Monitors PSECU competitors' **creative performance** and feeds creative strategy.

Level.**Pulse**

Gives PSECU leadership live **product-level performance**, 24/7.

Level.**Foundry**

Agentic web development for **rapid design and deployment** of websites and landing pages.

Trusted by growth-focused financial services brands

Financial brands trust LEVEL to grow, and
convert intent into active customers.

Level Executive Summit: Bringing our clients and partners together

Level's Client Advisory Board keeps us close to the real challenges leaders are facing today. When it's helpful, we connect you with peers and industry leaders who can offer perspective and practical insight.

Account Management built to compound value

We get clear on the **certified win conditions** that matter to your business and stay aligned as it evolves, focusing on measurable business impact.

We lead with our values.

- No ego. All in.
- Better every day.
- Relentless for results.
- Driven by truth.

5yrs

Average Account Manager Tenure

You have **one accountable partner** connecting strategy, media, creative, development, SEO, and analytics so the work stays aligned and keeps moving.

PSECU's Moment

National retail banks have never been less trusted*,
**but they still own the moment when a consumer is
ready to act.**

**Every one of those moments is a member PSECU
could be winning.**

Outspent. Not outmaneuvered.

Volume isn't the lever we'll pull. **Precision** is.

1. THE CHALLENGE

The most expensive auction in financial services.

- Chase, Capital One, Amex, Discover own share of voice across paid search and social.
- Their dollars push **auction CPCs higher** every quarter and saturate the inventory PA buyers see.
- Generic national creative **drowns out PA-specific value** in feeds and SERPs.

2. THE SPEND GAP

THE GAP

100x

+

What national issuers outspend PSECU by – for the same PA prospect.

3. THE LEVEL ADVANTAGE

Two proprietary tools turn budget into precision.

Pathfinder

AUDIENCE MODELING

With financial restrictions, **creative is the targeting** - Pathfinder ensures the message pre-qualifies the click.

Signal

REAL-TIME OPTIMIZATION

Reads what's converting and **reallocates spend in-flight**, compounding learnings faster than competitor ops.

Prioritizing the biggest growth opportunities

Growth Opportunities

Six product lines with shared metrics make it impossible to know which campaigns are actually working and providing return

The gap between platforms optimizing toward applications instead of activated members is causing a budget leak

Search can only capture intent that already exists. In markets where PSECU isn't yet known, there's no intent to capture

Top 3 Priorities

Restructure the account around products: each getting its own campaign, KPIs and budget logic

Connect outcomes back to the platforms so that real account events flow back as the optimization target, replacing application submits

Understand where growth is actually available so we know where upper-funnel investment will move the needle and where bottom-funnel capture is still the right call

Key Risks and Tradeoffs

Restructuring will create short-term performance volatility before it gets better

Connecting outcomes to the platform are only as good as the data behind it

Upper-funnel investment requires patience that media programs rarely get

When implementing change, the first rule is do no harm.

Scenario Response

Before PSECU allocates a dollar against the credit card portfolio, it needs to know which Pennsylvanians are actually in market, which ones will carry a balance, and where competitors are already winning.

Pathfinder is Level's AI-powered intelligence engine.

It generates the audience, market, competitive, and cultural intelligence our teams need, and translates it directly into strategy.

It is not a reporting tool

It is not a creative tool

It is not a replacement for judgment

Pathfinder is how we stop guessing and start knowing.

Audience Identification

Pathfinder answers:

Who are the right audiences for your brand?

Are we targeting the right people, or missing someone?

What actually drives their decisions and actions?

Level.Pathfinder: Data-driven audiences that strengthen channel plans

Member Activation

94%

PSECU Dormant Member Activators

~324-380K Members

Existing PSECU members without a credit card. Trust is established, but they're paying a competitor's APR while banking with PSECU.

TOP CHANNELS

 Email Owned

 In-App Banking

 Paid Social

OPPORTUNITY

They've been a PSECU member for years. Their credit card should be too.

Member Acquisition

83%

Prime-Credit Millennial Balance Carriers

~750K PA Adults

Rate-conscious dual-income households carrying balances as a cash-flow tool. Digitally research-driven and receptive to APR advantage messaging.

TOP CHANNELS

 Paid Search

 Meta Instagram

 Programmatic

OPPORTUNITY

They're comparing APRs right now. Be a competitive rate in the room.

89%

Gen X Debt Consolidators

~900K PA Adults

High-balance revolvers (\$6K-\$12K) slightly higher APRs. Financially experienced, research-thorough, and ready to switch for a meaningful rate differential.

TOP CHANNELS

 Paid Search

 Meta Facebook

 Programmatic

OPPORTUNITY

Still paying a high APR, show them the math and why switching makes sense.

61%

Financially Emerging Gen Z Credit Builders

~650K PA Adults

Mobile-native early credit users influenced by peer recommendations and FinTok content. Education-first messaging wins the first credit relationship.

 Influencers

 Instagram

 YouTube Pre-Roll

OPPORTUNITY

Their first credit card relationship is one that lasts. Win it now.

Confidential

Alignment scores reflect behavioral and attitudinal fit with PSECU's objective of acquiring higher-value cardholders who generate sustained revolving balances — not just application volume.

LEVEL

Targeting restrictions guide strategy and drive efficiency

Three regulatory frameworks govern how and where PSECU can target:

LEGAL GUIDELINES

No demographic targeting of any kind

- ✓ Physical locations as an anchor
- ✓ Eligibility based proximity

META SENSITIVE CATEGORY

No Zip Code targeting, Lookalikes, or Demo based interests

- ✓ 15 Mile Radius (Minimum)
- ✓ Broad interest targeting
- ✓ Retargeting

GOOGLE SENSITIVE CATEGORY

No zip codes, demographic audiences, or income targeting

- ✓ Self-identifying Keywords
- ✓ RLSA (Remarketing for Search)
- ✓ Broad geo-radius
- ✓ Product-Based Ad Groups

Gen X Debt Consolidators

Key Moment: Home renovation project pushing balances higher. A kitchen remodel, new roof, or HVAC replacement they put on a card.

Update to lead with with "Renovation on the card? Don't let 24% APR eat your equity move it to 0% through 6/30/27." Swap the stock photo for a finished-project shot (new kitchen, freshly painted room) paired with a clean savings callout.

PSECU

Sponsored

Library ID: 1410611884435685

Still thinking about moving your balance to the PSECU Classic Card? Now's the time to take advantage of 0% APR.

0% APR on balance transfers, good through 6/30/27 on balance transfers that post to your account by 6/30/26. A 5% fee applies to each balance transfer posted to your account during the promo period. See full terms & conditions at psecu.com/balancetransfer.

Don't Miss 0% Intro APR
[Get Your Classic Card](#)

Apply Now

Prime-Credit Millennial Balance Carriers

Key Moment: January statement shock after holiday spending, or tax refund season when they have cash to attack debt.

Update to lead with "That January statement hit different?" or "Put your tax refund to work — 0% APR through 6/30/27." Swap the shocked-at-phone stock photo for a lifestyle shot of young couple with new baby enjoying family moment

Two tracks: One growth model

TRACK 1: EXISTING MEMBER		TRACK 2: NEW MEMBER ACQUISITION	
32-42% of members have a Card	INSIGHT The remaining 58-68% are an untapped internal pool; they already trust PSECU, already verified, already reachable through paid and owned channels.	50% cite better rates as the #1 reason to join a CU*	INSIGHT The barrier to acquisition is not related just to price or rate, it's salience. It's that non-members don't know the rate advantage exists.
OPPORTUNITY Highest-conversion path in the portfolio 44.1% member approval rate vs. 10% cold. Reachable via email, in-app, and CRM-matched paid media. Rate differential closes the deal.		OPPORTUNITY Capture in-market demand before competitors do These consumers are self-identifying in real time, they just need paid media to prompt their interest and Search to capture demand.	
BUDGET 55% \$24,750 / mo		BUDGET 45% \$20,250 / mo	

Media strategy blueprint: starting point

	Track 1: Member activation Existing PSECU members · No Classic Card	Track 2: New member acquisition Gen X · Prime Millennials · Gen Z		
Funnel stage	Low funnel — conversion	Mid + low funnel — consideration / conversion		
Who (segments + targeting)	Existing Members	Gen X	Millennials	Gen Z
	· Members without a PSECU credit card · CRM-identified via first-party data	· PA adults actively researching credit cards · In-market via search + social interest signals · Close in proximity to PSECU relevant locations		
When & Where + How (geo logic)	CRM & Pixel driven · Statewide reach	Statewide-first · Local upweight on priority markets		
	CRM match: statewide PA • Audience is defined by CRM and 1p Pixel • Statewide by default; all eligible members are reachable • Social & Search led strategy, with Programmatic and YT as support and retargeting	Search: statewide PA	Social + prog + YT: upweight govt / university hubs	
	• Statewide reach builds recognition and traffic for lower-funnel engagement • Govt & employment hub upweight targets highest PSECU eligibility density • University markets weighted for all audiences and Gen Z pipeline development			

Media strategy blueprint: starting point

What (channel mix)				
	Social	Search	Prog.	OLV
	Social - Meta (35%) Programmatic Display (20%)	Search / PMax (32%) YT retargeting (13%)		
How much	55% \$24,750 / mo Primary KPI: Cost per activation			

	Search	Social	Prog.	OLV
	Search / PMax (42%) Programmatic Display (18%)	Social – Meta (28%) YT Retargeting (12%)		
	45% \$20,250 / mo Primary KPI: Cost per acquisition			

What success looks like beyond applications

A cardholder who will carry a revolving balance is our north star:

PRIMARY

Cost Per Activation or Acquisition

Applied, approved, and activated. This is the real unit of success.

QUALITY

Revolving Balance Rate

At 30, 60, and 90 days.
Defines a high-value
cardholder vs a
transactor.

ENGAGEMENT

Spend Activation

Within 30 days of card
receipt.

OPTIMIZATION SIGNAL

Cost Per Application Start

Platform input only. Not
a KPI.

Channel diagnostics such as CTR, CPC, VCR, CPCV, and frequency are health indicators, not KPIs. Level makes this distinction explicit in every reporting cycle and customizes each metric based on partners, ad experience, and creative format.

Beyond CPA: Measuring what actually matters

Every test has a documented hypothesis, a success threshold, and a pre-committed decision: scale, iterate, or discontinue.

APR vs Balance Transfer Messaging Hypothesis: Low APR messaging attracts fewer but higher-value revolving balance cardholders vs balance transfer offers that attract one-time movers. Decision: If revolving balance rate at 90 days is 15%+ higher for low APR cohort: scale low APR. Otherwise: iterate creative.	Activation vs Acquisition Budget Ratio Hypothesis: Shifting 5 to 10% incrementally from acquisition toward activation lowers blended cost per activation/acquisition without reducing new member volume. Decision: If cost per account decreases by 10%+: shift ratio further. Otherwise: hold current split.	Performance Max vs Search Only Hypothesis: PMax improves cost per account when optimized against activation/acquisition conversion signals, not raw application starts. Decision: If PMax CPA is within 15% of Search CPA with higher volume: scale PMax. Otherwise: search only.	7-Day vs 30-Day Retargeting Window Hypothesis: Shorter retargeting windows drive higher CVR because 67% of consumers decide within 14 days. Decision: If 7-day window CVR is 20%+ higher: shift all retargeting budget to shorter window.
Days 1 - 30		Days 31 - 60	Days 61 - 90

From Launch to Lift: 90 Day Plan Built to Scale

Every test has a documented hypothesis, a success threshold, and a pre-committed decision: scale, iterate, or discontinue.

0-30 DAYS BUILD + BASELINE

All core audiences and channels live

Establish data collection processes for Level.Signal development

Retargeting pools building

Begin testing agenda by focusing on budget allocation and messaging

31-60 DAYS OPTIMIZE + SCALE

Reallocate by cost per account activation/acquisition

Feed approved application data into Signal as it flows from HubSpot

Segment retargeting by intent level: site visitors vs application starters

Scale highest-ROI audiences, pause lowest-ROI channels

61-90 DAYS COMPOUND + PROVE

Scale highest-ROI segments with reserve budget

Start to delivering initial in-platform testing results with scale, iterate, or discontinue decisions

Casual incrementality testing initiated to begin validating majors strategic initiative as a part of broader learning agenda

Month 3 written report delivered to PSECU leadership

Measurement & Data Strategy

A woman with glasses is sitting on a yellow sofa in a living room, reading a book. Two children, a girl and a boy, are jumping in front of her. The room has a patterned rug, a side table with vases, and a bookshelf in the background.

A measurement model that connects
every media dollar **to an activation, by
member, by product line.**

Why this measurement approach wins for **PSECU**

1. Business outcomes over proxies

Every decision is anchored to an activation, closed loans, and balance quality by product, by segment

2. Measurement that matures with the program

A phased roadmap from pixel baseline to direct attribution to value-based bidding to incrementality-validated full-funnel

3. Testing and reports that produce decisions

Every test has a pre-committed action with the Learning Agenda compounding throughout the year. The highest priority strategic questions are answered by end of Year 1

4. Infrastructure PSECU owns outright

All accounts, data, and tracking belong to PSECU with no structural dependencies.

A realistic starting point

VISIBLE

What you can see

- Website traffic
- Form submissions & app starts
- Platform-reported conversions
- Click-through and impression data

GAP

What you probably can't see yet

- Application approvals
- Activated accounts & closed loans
- Balance quality/revolving balances
- Performance split by new member vs. existing members

IMPACT

What that gap costs you

- Algorithms optimizing toward high level leads, irrespective of ultimate business value
- Budget allocations based on proxy metrics
- Limited ability to prove ROAS/ROI to leadership

What we optimize to changes as the signal matures

1 CRAWL

Pixel + Aggregate CRM

Optimize to:

*Cost per app
start/complete*

2 WALK

**Direct Last-Touch
Attribution**

Optimize to:

*Cost per product
activation*

3 RUN

**True View via
Incrementality with
Quality Signals**

Optimize to:

*True Cost per product
activation/ROAS*

Connecting every click to every funded product

Not just CPA. The full chain from impression to funded product to evolving member value.

How KPIs evolve as measurement model matures

Product	New Member KPI	Existing Member KPI
Credit Cards	Cost per activated cardholder	Cost per activated cardholder
Auto Loans	Cost per funded loan	Cost per cross-sell loan
Mortgage / HELOC	Cost per funded HE/HELOC	Cost per funded HE/HELOC
Personal Loans	Cost per funded loan	Cost per cross-sell loan
Deposits	Cost per funded account	Cost per funded account

Quality signals (all products)

- Loan-to-value ratio at origination
 - Revolving balance at 30/60/90 days (cards)
- Opening deposit + direct deposit adoption (deposits)
 - Avg. loan size, purchase vs. refi mix (mortgage)

Level.Signal - Predictive Lead & Value Modeling

Compliance note: Signal scores passed via click IDs and offline conversion imports. No financial profiling or restricted data will be used in model training or activation; Permissible inputs will be scoped with PSECU compliance during onboarding

Two solutions working together

INCREMENTALITY

Causmos+
Causal Analytics

WHAT IT IS

Causal analytics that **determine true media lift** and incremental contribution.

PSECU VALUE

Measures **actual business contribution** —true lift, not observational.

ROLE IN STRATEGY

Source of truth for validating broader strategic tests & initiatives.

TRACKING ENABLEMENT

Level.Pixel
Campaign Collector

Proprietary tracking pixel that **fires on lead & app events** ; data housed with PSECU.

Bridges last-click attribution gaps when engineering tracking is slow.

Backup collector for click IDs, UTMs and last-click data.

TOGETHER

Causmos+ proves **what works**; Level.Pixel makes sure **every signal is captured**.

Three measurement layers, one source of truth

What each layer answers

- **In-channel:** Day to day optimization questions (which audiences/creative/tactics to priority/deprioritize in short term)
- **Incrementality:** Is this channel/strategy actually driving net-new accounts?
- **MMM:** How do all channels interact and where are we hitting saturation?

How the layers work together

- In-channel metrics drive daily bid and budget decisions
- Causmos validates whether efficiency claims hold at the account level
- MMM models what incrementality can't isolate: cross-channel effects and saturation curves

Testing and learning to drive impact

First test — fully outlined

Upper-Funnel Lift on Credit Card Accounts

Hypothesis

Upper-funnel media (OLV + programmatic) in two priority PA markets lifts credit card accounts 15%+ versus baseline

Method

Causmos TBR Causal Analytics · Synthetic baseline controls · 8-week minimum flight · CRM funded account reporting as source of truth

Success metric

Incremental cost per account in test markets vs. baseline, measured in CRM

Pre-committed decision

>15% lift → Scale to additional PA markets

5–15% → Iterate on creative / channels and re-test

<5% → Reallocate budget to lower-funnel

Operating Model & Partnership

PSECU has six products across two member tracks, with creative, compliance, CRM, SEO and data teams all needing to stay aligned.

Our operating model exists because misalignment at this scale will cost members.

A meeting cadence built for PSECU's structure

Three parallel tracks with every meeting having a documented objective and a written summary within 24 hours

Creative Collaboration

Level can support client-side creative at the briefing & performance feedback stages of the process.

How we collaborate across your teams

Every PSECU team has a named Level lead, a meeting cadence, and a documented output.

SEO Partner

Level Media Lead

Bi-weekly + SEO partner coordination

Keyword gap analysis and paid/organic overlap alignment so paid and SEO are not working against each other.

Media intelligence flows to the SEO partner proactively.

Data & IT team

Level Data Lead

Ongoing Data lake compatible outputs

All Level outputs structured for PSECU's data lake from day one. Full export capability at all times.

PSECU retains full ownership of all accounts and data at every stage.

HubSpot & CRM team

Level Data Lead

Monthly This integration closes the loop

Audience strategy, suppression list management, and offline conversion data cadence. HubSpot is native to Level.

Outcomes flowing to platforms is what makes Signal and value-based bidding possible.

Internal creative team

Level Media Lead

Bi-weekly Performance-first feedback

Creative performance feedback by product and audience. Prism competitive creative intel shared each cycle.

On Meta, creative carries the targeting load. This collaboration directly affects performance.

Tools connecting every team: **Level Pulse** · **Asana** · **Slack** · **Guru**

How we deliver insights vs. reporting

Reporting describes what happened. Insights explain why it happened and what to do next. Every Level output does both.

ALWAYS ON

Level Pulse

Real-time visibility. No waiting for a report.

- ⚡ Product-level CWC status, 24/7. New member and existing member tracks always shown separately.
 - ⚡ Credit cards, auto loans, and mortgage tracked independently.
 - ⚡ PSECU leadership sees performance between every reporting cycle, without asking.
-

MONTHLY & QUARTERLY

Strategic insight sessions

The why and the what's next

- ⚡ Every report answers: what's working and why, new opportunities uncovered by the data, what PSECU teams need to decide.
 - ⚡ Executive summaries written to capture the most important takeaways
 - ⚡ Attribution assumptions always noted where they affect interpretation.
-

The Level standard for every report

- | | | | |
|---|---|---|--|
| 1. What changed by product & member segment | 2. Why it happened with supporting data | 3. Informed and prioritized recommendations | 4. What PSECU needs to decide or approve |
|---|---|---|--|

Sample learning agenda

CORE LEARNING	GOAL	SUCCESS	IMPLICATIONS	TOOL
Upper-funnel lifts BOF accounts	OLV + programmatic in priority PA markets drives incremental accounts	15%+ account lift in test vs. control	Scale to more markets or reallocate	Causal Analytics incrementality
Optimal activation vs. acquisition split	Find ratio minimizing blended cost per account	10%+ decrease after incremental shift toward activation	Shift further or hold; revisit quarterly	Causal Analytics + CRM segmented reporting
APR vs. balance transfer messaging	Which value prop attracts revolving balance cardholders	90-day revolving balance 15%+ higher for APR cohort	Scale winning creative or iterate hybrid	In-platform A/B + CRM balance data

When we challenge assumptions

Proving the revenue impact of mid-funnel media for a digital-first mortgage lender

The Challenge

The client's media mix was 95% dependent on Google Search.

Leadership questioned whether mid-funnel channels like PMax and Demand Gen were generating incremental value—or simply capturing demand that would have arrived organically.

With a key competitor dominating auction spend, the client needed data-driven proof to justify diversified investment across the funnel.

The Result

Level ran a causal impact analysis to measure what would have happened to brand search volume if mid-funnel campaigns had never been paused.

Two natural experiments were measured: pausing Demand Gen and PMax, each against 3 months of pre-intervention data.

Statistical certainty was near 100%.

43.7%

Drop in brand queries after pausing Demand Gen.

22.4%

Decline in brand searches after pausing PMax.

26,000+

Brand searches lost vs. counterfactual forecast.

GOOD
ENOUGH
ISN'T.

Product-level strategy across the full funnel.
Measurement that doesn't just report what happened but tells you what to do next.

And a team of passionate, data-driven marketers who are thrilled at the opportunity to further **PSECU's** mission, especially with 25% of our agency being in PA.

We look forward to continuing the conversation.

Q&A / Next Steps

Thank you.
